

**STACK METALLURGICAL SERVICES, INC.**  
*Excellence in Heat Treating for the Northwest*  
**Flood Contingency Plan**

Wednesday, December 09, 2009

Stack Metallurgical Services is a Nadcap accredited heat treating company located in Portland, OR. Our processing capabilities include aluminum, carbon steel alloys, stainless steel alloys, and titanium. An in depth detail of our capabilities and qualifications may be obtained from our website ([www.stackmet.com](http://www.stackmet.com)).

Proposed steps in case of Kent Valley flooding:

Increase pick-up and delivery schedule to the Greater Seattle area from the current three days to five days a week.

In the event that our current location for pickup and drop off (Cascade Metallurgical Services) is unavailable due to flooding, Stack would contract with another location outside of the affected area for that purpose.

Stack would continue to direct deliveries to all customers that can be reached and are within our current delivery area which extends from Portland to south Seattle along the I-5 corridor.

A special e-mail address would be created for Puget Sound area customers to track and expedite orders.

Stack would increase the number of personnel in the region to assist customers in any way we can.
